Subject: RE: Chevron and Phillips Basin 22 Work Plans

Linda,

Thank you for providing these comments. I spoke with Eva about this and gave her an update to help put this in perspective to the overall project and in relation to the significant remedial actions and source control work that has already been completed at these sites. Just for reference, these work plans were meant to represent the first phase of a multistep approach to deal with the potential issues at the sites. Many of the comments you provided have been previously discussed with the sites during our planning meeting so I will continue to carry those forward in our comments and approval of the work plans. I'll also probably provide them directly to the sites. Thanks again for your input.

Subject: Chevron and Phillips Basin 22 Work Plans

Mike,

Thank you for the opportunity to review these Chevron Willbridge and Phillips 66 Basin 22 work plans. The attached City comments on the plans reflect input from our Portland Harbor and MS4 programs. I appreciate your consideration of these comments and your efforts to keep these sites moving in the right direction on the contaminated groundwater concerns for the City storm system affiliated with Outfall 22.

The approved plans will help to expedite the issuance of necessary BES Sewer Entry permits, which can take as little as a couple of weeks to get if all the necessary information is provided in the permit application materials. I'm part of the permit review process for those and will help to shepherd it along once Chevron and Phillips submit for the permits.

Thanks Linda,

The links to download the work plans are in the attached emails.

At this point, the work plans are for additional investigation. I forwarded Laura's inspection letters to the remediation management folks at these facilities for their use in the site investigation. If you do provide any comments, it would be most helpful for me if they can be focused on productive improvements of the work plan.
